

NEW ISSUES

RESPONSE AND RESTORATION

***NOAA, DOJ, DOI, and State of Texas
Settle Chevron Natural Resources
Liability***

FYI— NOAA, Department of Justice (DOJ), Department of the Interior, and three Texas agencies reached a Consent Decree settlement with Chevron over their release of oil, volatile organic compounds, and hazardous substances (such as polycyclic aromatic hydrocarbons, lead, and chromium) from the Old Gulf Refinery in Port Arthur, Texas. Chevron owned and/or operated this facility since 1902. Assessment was begun in September 1999 to determine the impacts to the Sabine River estuary, an important nursery for NOAA's estuarine trust resources.

NOAA ACTION— NOAA, as lead trustee of the multiagency team, resolved the natural resource damages (NRD) liability providing technical expertise, assessments, and coordination to integrate remediation and restoration of this Sabine River estuary. Chevron will compensate natural resource losses by replanting estuarine marsh and wet prairie and constructing water control structures to help restore more than 1,700 acres. In January 2005, DOJ will issue a press release on the Consent Decree.

Ron Gouguet (206) 526-6938

MAPPING AND CHARTING

***NOAA Coast Survey Encourages
Science and Math Education***

FYI— The Atlantic Hydrographic Branch of Coast Survey in Norfolk is working with CHROME (Cooperating Hampton Roads Organizations for Minorities in Engineering, Inc.) to offer classes in cartography and

hydrography. CHROME encourages opportunities for underrepresented minority and female students to enter science, mathematics, engineering and related technical fields in the Hampton Roads area.

Ashley Chappell@noaa.gov

ECOSYSTEMS RESEARCH

***Expanded Mandate for Coastal
Ecosystem Health Programs Signed
by President***

FYI— President Bush recently signed the Harmful Algal Bloom and Hypoxia Amendments Act (HABHRCA) of 2004, which reauthorizes and expands NOAA's efforts to combat two coastal phenomena that routinely kill marine animals and cost millions of dollars each year in environmental and economic damages. This legislation enables the National Centers for Coastal Ocean Science (NCCOS) to advance the scientific understanding of and ability to detect, monitor, assess, and predict harmful algal blooms (HABs) and hypoxic (low oxygen) conditions. Further, it allows NCCOS to broaden existing programs in additional geographic areas such as the Great Lakes and upper reaches of estuaries.

NOAA ACTION— National science priorities will be addressed through the reconstituted Federal Interagency Task Force on HABS and Hypoxia reestablished in the new law. Since passage of HABHRCA in 1998, NCCOS has been assessing and predicting HABs and hypoxia through the Gulf of Mexico HAB forecasting system, integrated HAB observing systems in the Pacific Northwest, and ecological forecasts for Gulf of Mexico dead zone.

Rob.Magnien@noaa.gov

COASTAL AND MARINE RESOURCES

***Boxer, Feinstein, and Farr Concerned
Over Loss of Earmark in FY 05***

FYI — NOS Assistant Administrator Richard W. Spinrad received a letter from California Senators Barbara Boxer and Dianne Feinstein, and Representative Sam Farr on December 13, 2004, expressing concern that the Center for Integrated Marine Technologies (CIMT) was not funded in the FY 2005 appropriation and requesting that NOAA provide \$2.5 million from other sources. CIMT has been funded for the past three years as part of the congressional Coastal Observation Technology System (COTS) earmark. NOS policy staff coordinated a response and obtained clearance from General Counsel for Ocean Services. The letter was submitted through control correspondence for review and clearance by NOAA Legislative Affairs and NOAA Finance and Administration on December 22.

Glenn Boledovich (301) 713- 3070, ext. 193

STATUS UPDATES

RESPONSE AND RESTORATION

***NOAA Responds to Ship Aground in
Unalaska***

UPDATE — The spill created by the M/V SELENDANG AYU as it went aground and broke in two on Unalaska Island on December 8 has prompted many NOAA responses, thwarted by the remote location and forecasted severe weather that called the ship back to Dutch Harbor on December 20. The next weather window for operations is expected on December 24.

The 730-foot vessel was loaded with soybeans, 483,000 gallons of heavy bunker

oil and 20,000 gallons of diesel fuel. The vessel is broken into two nearly equal length sections on Spray Cape, AK. On December 20, a salvage team reboarded the stern portion and found significant structural damage. The bow section is now listing at 10 degrees. A fuel tank holding approximately 40,000 gallons of fuel ruptured when the vessel broke apart. Other tanks are believed to be leaking but the actual amount of spilled fuel is unknown. Heavy shoreline oiling was reported on Spray Cape adjacent to the grounding location. Movement of vessel sections and potential release of oil are anticipated during the upcoming storm. Large masses of floating and stranded soybeans have been observed on adjacent shorelines.

NOAA ACTION — At the Joint Command Center, NOAA continues to:

1. Participate in aerial observations and mapping of floating and shoreline oiling.
2. Provide on-scene weather, including establishing an emergency remote weather station and having a dedicated meteorologist on-scene.
3. Coordinate environmental issues for the Unified Command, including technical issues related to potential dispersant use.
4. Prepare short and long-term trajectory forecasts for the residual oil onboard.
5. Review satellite data and remote sensing information for potential uses.
6. Respond to USCG request for assistance in locating flight recorder.

NOAA was asked to lead as Federal trustee for related natural resource damage assessment. Approximately 600 oiled birds were observed in the spill area, but less than 10 percent have been captured or collected.

Doug.Helton@noaa.gov

MAPPING, CHARTING, AND NAVIGATION

***NOAA Hydrographic Survey Support
to Delaware River Oil Spill Intrigues
Philadelphia Inquirer Journalist***

UPDATE — In December, NOAA's Office of Coast Survey dispatched its Navigation Response Team 5 (NRT5) to support the US Coast Guard and Army Corps of Engineers in response to the Delaware River oil spill near Philadelphia, PA. NRT5 surveyed the river from the incident scene to the Commodore Barry Bridge using side scan sonar. Survey results were used in conjunction with US Army Corps of Engineers multi-beam surveys of the same area to lift the draft restrictions for vessels transiting that stretch of the Delaware River. NRT5 surveyed within the accident area and produced high quality side-scan images of a piece of an iron pipe the oil tanker is believed to have struck. The images and files of all side scan work were provided to the US Coast Guard and US Army Corps of Engineers. NRT5's efforts attracted the Philadelphia Inquirer journalist who included NRT5's efforts in the spill in an article. The journalist was invited to Coast Survey's Silver Spring headquarters to discuss a more comprehensive article on NOAA's Navigation Services activities.
